AMTRON® Compact - the new MENNEKES charging solution for your home

A compact design, easy handling and compatibility with all new vehicles characterise this wall charger.

Whether in a garage, under a carport or in a rented parking space - the domestic charging of an electric car must always be done on a safe charging point. MENNEKES - the pioneer of electric mobility - has developed the AMTRON® Compact charging box exactly for this purpose.

AMTRON® Compact, specially developed for domestic use, is the latest member of the premium AMTRON® range. AMTRON® Compact combines the high-quality AMTRON® design in a smaller form with a focus on function. Compatible with all upcoming electric vehicles, its 11kW charging power is ideal for private use. The wall charger is a future-proof "Made in Germany" solution for private home and apartment parking garages.

Easy charging

The compact design makes this wall box the ideal charging point particularly for tight garage situations. The tethered five-metre long cable with type 2 plug not only offers convenient handling, but also ensures that almost all new electric vehicles available in Europe can be charged - simply plug in and charge. No authorisation is required.

AMTRON® Compact offers 3.7 kW (single-phase) up to 11 kW (three-phase) charging rates in order to meet the requirements of the broad spectrum of vehicles and power grids. Status indicators keep you informed at all times.

Press release

Simply safe

Every home and underground car park situation is different. Electrical appliances must therefore meet the highest safety standards. AMTRON® Compact is designed for safe operation and a long service life. This starts with the IP54 housing protection rating, which ensures that the home charger can also be installed outdoors. The temperature is measured within the housing to protect from overheating. The standby power consumption of the wall charger is particularly low (approx. 1W). The safety features are rounded off with an integrated DC fault current detection for personal safety as well as simple load management as additional protection for the home electrical installation.

Easy to install

AMTRON® Compact not only has a modern design concept, but is also easy to install. The power cable may be fed in from above, below or behind. The convenient drilling template with integrated spirit level enclosed makes aligning and installing easy.

Simply electric

With this new Wall charger from MENNEKES, nothing will stand in the way of an electric vehicle lifestyle. AMTRON® Compact is an attractive, safe and convenient solution for private parking spots, garages and carports. The high vehicle compatibility in combination with a charging capacity of up to 11kW makes this home charger a future-proof charging solution for private users.

Kirchhundem, 27.06.2019

MENNEKES Elektrotechnik GmbH & Co. KG was founded in 1935 and is the developer of the European standard charging plug for electric vehicles as well as leading manufacturer of industrial plugs and sockets. The company has a global presence with subsidiaries and representations in more than 90 countries and employs 1,000 people worldwide, thereof two thirds in Germany. The product range comprises standardised plugs and sockets in over 15,000 different variants and designs as well as all fields of the electromobility: from vehicle inlets and charging cables to complete charging stations.

In the past business year, the MENNEKES Group achieved a consolidated turnover of more than 140 million Euros.
