Cepex – Modularity that fits. Everywhere. **MENNEKES presents the enhanced Cepex family for demanding applications in commercial, industrial, and infrastructure environment**

Kirchhundem, March 2026. With the Cepex family, MENNEKES offers a versatile and robust range of receptacles designed for environments where maximum safety, flexibility, and durability are essential. Whether in production halls, laboratories, medical facilities, large commercial kitchens, or modern office spaces, Cepex receptacles stand for installations that combine functionality with a clean, uniform design. The product family includes SCHUKO®, CEE, and data port solutions.

Thanks to variants for flush-mounted, surface-mounted, and panel-mounted installations, Cepex provides exceptional flexibility. Its high modularity and well-designed system architecture allow seamless adaptation to different installation areas and spatial requirements. By combining a flush-mounted installation box with any Cepex panel-mounted receptacle, a complete flush-mounted solution can be created, reducing storage needs and offering maximum configuration freedom. The range also includes a flexible double receptacle that can be equipped with SCHUKO®, CEE, or a combination of both.

Maximum flexibility for professional applications

Cepex receptacles feature generous wiring space, flexible cable entry options, and a secure installation process – even in tight spaces. Available in light grey, pearl white, pure white, white aluminum, and deep black, they blend harmoniously into a wide range of environments and match common duct and installation systems. With protection class IP54, they offer reliable performance in dusty or humid areas.

The Cepex surface-mounted variants provide particularly convenient and installation-friendly handling: large wiring compartments, a housing base that can be rotated by 180°, and integrated membranes support easy cable routing and contribute to safe, clean installations

across many application areas.

Smart solutions for data and power

Cepex data port receptacles extend the system to include professional network connectivity – ideal for control stations, warehouses, airports, production lines, and laboratory environments. They can be combined with Cepex CEE, SCHUKO® and other modules, achieving protection class IP54 with the cover closed (even with a plug inserted). An integrated safety lock prevents unauthorized access.

The data modules support a wide range of RJ45 and manufacturer-independent keystones – from Cat.3 to Cat.7 as well as electrical and optical interfaces – making the system extremely versatile and future-ready.

Cepex – the modern receptacle solution for installation environments that demand more

With this product line, MENNEKES offers a consistent, high-quality system that combines safety, functionality, and modern design into one modular concept. From dry indoor areas to harsh industrial environments, Cepex enables safe, clean, and durable installations wherever reliable technology is essential.

The MENNEKES Group is a leading manufacturer of industrial plugs and eMobility charging solutions. Since 2014 our “Type 2” charging system with the well-known plug has been the EU standard for electric vehicles throughout Europe. Founded in 1935 our medium-sized family business from the Sauerland region is represented in more than 90 countries through subsidiaries and agencies, and employs around 1,600 people worldwide.

We produce plugs, connectors, sockets and receptacle combinations in a wide variety of designs. Our robust, long-lasting solutions are used wherever electricity must flow safely and reliably – for example in various industrial sectors, in tunnels and railway stations, in mining and shipbuilding, in container ports, data centres, wind farms, by fire departments and disaster relief units and at events of all kinds.

In the field of electromobility MENNEKES offers intelligent charging solutions for the transportation of the future: Our portfolio includes charging cables with “Type 2” plugs, intelligent charging stations and wallboxes – for private homes, industry, commercial applications and public parking areas run by municipalities. We also offer matching software solutions: apps for electric-vehicle drivers and electricians, a billing service and charge point management. We provide our customers with a trained network of electrical trade partners. For the automotive industry and its suppliers, we manufacture charging inlets and charging cables for electric vehicles. The MENNEKES Group recently generated revenues of around 300 million euros.
